

CONTENTS

Preface	xi
Chapter 1. Bivariate Polynomials	
1. Introduction	1
2. Norms of Polynomials on Triangles	1
3. Derivatives of Polynomials	2
4. Polynomial Approximation in the Maximum Norm	3
5. Averaged Taylor Polynomials	4
6. Polynomial Approximation in the q Norm	7
7. Approximation on Nonconvex Ω	9
8. Interpolation by Bivariate Polynomials	10
9. Remarks	15
10. Historical Notes	17
Chapter 2. Bernstein-Bézier Methods for Bivariate Polynomials	
1. Barycentric Coordinates	18
2. Bernstein Basis Polynomials	20
3. The B-form	22
4. Stability of the B-form Representation	24
5. The deCasteljau Algorithm	25
6. Directional Derivatives	27
7. Derivatives at a Vertex	31
8. Cross Derivatives	34
9. Computing Coefficients by Interpolation	36
10. Conditions for Smooth Joins of Polynomials	38
11. Computing Coefficients From Smoothness	41
12. The Markov Inequality on Triangles	44
13. Integrals and Inner-products of B-polynomials	45
14. Subdivision	47
15. Degree Raising	49
16. Dual Bases for the Bernstein Basis Polynomials	49
17. A Quasi-interpolant	51
18. The Bernstein Approximation Operator	52
19. Remarks	57
20. Historical Notes	60
Chapter 3. B-Patches	
1. Control Nets and Control Surfaces	62
2. The Convex Hull Property	65
3. Positivity of B-patches	65
4. Monotonicity of B-patches	70

5. Convexity of B-patches	72
6. Control Surfaces and Subdivision	77
7. Control Surfaces and Degree Raising	80
8. Rendering a B-Patch	81
9. Parametric Patches	84
10. Remarks	84
11. Historical Notes	85

Chapter 4. Triangulations and Quadrangulations

1. Properties of Triangles	86
2. Triangulations	87
3. Regular Triangulations	88
4. Euler Relations	89
5. Storing Triangulations	91
6. Constructing Triangulations	93
7. Clusters of Triangles	95
8. Refinements of Triangulations	97
8.1. Clough-Tocher Refinement	98
8.2. Powell-Sabin Refinement	99
8.3. Powell-Sabin-12 Refinement	101
8.4. Uniform Refinement	102
9. Optimal Triangulations	103
10. Max-Min Angle Triangulations	104
11. Delaunay Triangulations	109
12. Constructing Delaunay Triangulations	109
13. Type-I and Type-II Triangulations	110
14. Quadrangulations	111
15. Triangulated Quadrangulations	116
16. Nested Sequences of Triangulations	119
17. Remarks	121
18. Historical Notes	124

Chapter 5. Bernstein-Bézier Methods for Spline Spaces

1. The B-form Representation of Splines	127
2. Storing, Evaluating and Rendering Splines	128
3. Control Surfaces and the Shape of Spline Surfaces	129
4. Dimension and a Local Basis for $\mathcal{S}_d^0(\Delta)$	130
5. Spaces of Smooth Splines	132
5.1. Supersplines	132
5.2. Smoothness Conditions Across Edges	133
5.3. Smoothness at a Vertex	134
5.4. The Matrix Form of Smoothness Conditions	135
6. Minimal Determining Sets	135
7. Approximation Power of Spline Spaces	138

8. Stable Local Bases	141
9. Nodal Minimal Determining Sets	143
10. Macro-element Spaces	146
11. Remarks	147
12. Historical Notes	149

Chapter 6. C^1 Macro-element Spaces

1. A C^1 Polynomial Macro-element Space	151
2. A C^1 Clough-Tocher Macro-element Space	155
3. A C^1 Powell-Sabin Macro-element Space	159
4. A C^1 Powell-Sabin-12 Macro-element Space	163
5. A C^1 Quadrilateral Macro-element Space	166
6. Comparison of C^1 Macro-element Spaces	171
7. Remarks	172
8. Historical Notes	173

Chapter 7. C^2 Macro-element Spaces

1. A C^2 Polynomial Macro-element space	174
2. A C^2 Clough-Tocher Macro-element Space	178
3. A C^2 Powell-Sabin Macro-element Space	182
4. A C^2 Wang Macro-element Space	186
5. A C^2 Double Clough-Tocher Macro-element	189
6. A C^2 Quadrilateral Macro-element Space	192
7. Comparison of C^2 Macro-element Spaces	196
8. Remarks	197
9. Historical Notes	198

Chapter 8. C^r Macro-element Spaces

1. Polynomial Macro-element Spaces	199
2. Clough-Tocher Macro-element Spaces	203
3. CT Spaces with Natural Degrees of Freedom	209
4. Powell-Sabin Macro-element Spaces	214
5. PS Spaces with Natural Degrees of Freedom	219
6. Quadrilateral Macro-element Spaces	226
7. Remarks	231
8. Historical Notes	233

Chapter 9. Dimension of Spline Splines

1. Dimension of Spline Spaces on Cells	234
2. Dimension of Superspline Spaces on Cells	238
3. Bounds on the Dimension of $\mathcal{S}_d^r(\Delta)$	240
4. Dimension of $\mathcal{S}_d^r(\Delta)$ for $d \geq 3r + 2$	244
5. Dimension of Superspline Spaces	249
6. Splines on Type-I and Type-II Triangulations	253
7. Bounds on the Dimension of Superspline Spaces	255

8. Generic Dimension	262
9. The Generic Dimension of $\mathcal{S}_3^1(\Delta)$	265
10. Remarks	272
11. Historical Notes	274

Chapter 10. Approximation Power of Spline Spaces

1. Approximation Order	276
2. C^0 Splines and Piecewise Polynomials	277
3. Approximation Power of $\mathcal{S}_d^r(\Delta)$ for $d \geq 3r + 2$	277
3.1. Near-Degenerate Edges and Near-Singular Vertices	277
3.2. Three Lemmas	278
3.3. A Superspline Subspace of $\mathcal{S}_d^r(\Delta)$	282
4. Approximation Power of $\mathcal{S}_d^r(\Delta)$ for $d < 3r + 2$	286
4.1. The Case $d < (3r + 2)/2$	286
4.2. The Case $2r + 2 \leq d < 3r + 1$	289
4.3. The Case $(3r + 2)/2 \leq d < 2r + 1$	298
4.4. The Space \mathcal{S}_3^1	299
5. Remarks	303
6. Historical Notes	305

Chapter 11. Stable Local Minimal Determining Sets

1. Introduction	307
2. Supersplines on Four-Cells	308
2.1 The Vertex is Singular	308
2.2 The Vertex is Nonsingular	310
3. A Lemma on Near-Degenerate Edges	316
4. A Stable Local MDS for $\mathcal{S}_d^{r,\mu}(\Delta)$	317
5. A Stable MDS for Splines on a Cell	324
6. A Stable Local MDS for $\mathcal{S}_d^{r,\rho}(\Delta)$	326
7. Stability and Local Linear Independence	327
8. Remarks	330
9. Historical Notes	332

Chapter 12. Bivariate Box Splines

1. Type-I Box Splines	333
2. Type-II Box Splines	342
3. Box Spline Series	345
4. The Strang-Fix Conditions	350
5. Polynomial Reproducing Formulae	354
6. Box Spline Quasi-Interpolants	358
7. Half Box Splines	361
8. Finite Shift Invariant Spaces	365
9. Remarks	373
10. Historical Notes	375

Chapter 13. Spherical Splines

- 1. Spherical Polynomials 377
 - 1.1. Spherical Triangles 377
 - 1.2. Spherical Barycentric coordinates 378
 - 1.3. Spherical Bernstein Basis Polynomials 380
 - 1.4. The Spherical B-form 381
 - 1.5. Subdividing Spherical Polynomials 382
 - 1.6. Degree Raising Spherical Polynomials 383
 - 1.7. Restrictions of Spherical Polynomials to Edges 384
 - 1.8. Homogeneous Trivariate Polynomials 385
 - 1.9. Spherical Harmonics 386
 - 1.10. Spherical Patches 388
- 2. Derivatives of Spherical Polynomials 390
 - 2.1. Directional Derivatives of Functions on the Sphere . . 390
 - 2.2. Directional Derivatives of Spherical B-polynomials . . 391
 - 2.3. Joining two Spherical Polynomials Smoothly 393
- 3. Spherical Triangulations 395
- 4. Spaces of Spherical Splines 396
 - 4.1. C^0 Spherical Splines 396
 - 4.2. Spaces of Smooth Spherical Splines 398
 - 4.3. Minimal Determining Sets 400
 - 4.4. Stable Local Bases 401
 - 4.5. Nodal Determining Sets 402
 - 4.6. Dimension of Spherical Spline Spaces 402
- 5. Spherical Macro-element Spaces 405
- 6. Remarks 406
- 7. Historical Notes 407

Chapter 14. Approximation Power of Spherical Splines

- 1. Radial Projection 408
- 2. Projections of Triangulations 408
- 3. Norms on the Sphere 413
 - 3.1. Norms of Homogeneous Extensions 413
 - 3.2. Norms of Spherical Polynomials on Spherical Triangles 414
 - 3.3. Stability of the Spherical B-form 414
- 4. Spherical Sobolev Spaces 415
- 5. Sobolev Seminorms 418
- 6. Clusters of Spherical Triangles 420
- 7. Local Approximation by Spherical Polynomials 422
- 8. The Markov Inequality for Spherical Polynomials 423
- 9. Spaces with Full Approximation Power 424
 - 9.1. Spherical Spline Spaces with Stable Local MDS 424
 - 9.2. The Space $\mathcal{S}_d^r(\Delta)$ for $d \geq 3r + 2$ 427
 - 9.3. Spaces with a Stable Local NMDS 429

10. Remarks	431
11. Historical Notes	432

Chapter 15. Trivariate Polynomials

1. The Space \mathcal{P}_d	433
2. Barycentric Coordinates	434
3. Bernstein Basis Polynomials	436
4. The B-form of a Trivariate Polynomial	437
5. Stability of the B-form	439
6. The de Casteljau Algorithm	440
7. Directional Derivatives	441
8. B-coefficients and Derivatives at a Vertex	442
9. B-coefficients and Derivatives on Edges	445
10. B-coefficients and Derivatives on Faces	448
11. B-Coefficients and Hermite Interpolation	450
12. The Markov Inequality on Tetrahedra	451
13. Integrals and Inner-Products	451
14. Conditions for Smooth Joins	452
15. Approximation Power in the Maximum Norm	453
16. Averaged Taylor Polynomials	454
17. Approximation Power in the q -Norms	455
18. Subdivision	456
19. Degree Raising	457
20. Remarks	457
21. Historical Notes	459

Chapter 16. Tetrahedral Partitions

1. Properties of a Tetrahedron	460
2. General Tetrahedral Partitions	462
3. Regular Tetrahedral Partitions	463
4. Euler Relations	464
5. Constructing and Storing Tetrahedral Partitions	468
6. Clusters of Tetrahedra	469
7. Refinements of Tetrahedral Partitions	471
7.1. The Alfeld Refinement	471
7.2. The Worsey-Farin Refinement	473
7.3. The Worsey-Piper Refinement	474
7.4. The Alfeld-16 Refinement	475
7.5. Quasi-uniform Refinement	475
8. Delaunay Tetrahedral Partitions	478
9. Remarks	478
10. Historical Notes	479

Chapter 17. Trivariate Splines

1. C^0 Trivariate Spline Spaces	480
---	-----

- 2. Spaces of Smooth Splines 482
- 3. Minimal Determining Sets 483
- 4. Approximation Power of Trivariate Spline Spaces 485
- 5. Stable Local Bases 488
- 6. Nodal Minimal Determining Sets 489
- 7. Hermite Interpolation 491
- 8. Dimension of Trivariate Spline Spaces 493
 - 8.1. Connection with the Bivariate Problem 493
 - 8.2. Upper and Lower Bounds 493
 - 8.3. The Case $d \geq 8r + 1$ 496
 - 8.4. Oranges 497
- 9. Remarks 498
- 10. Historical Notes 499

Chapter 18. Trivariate Macro-Element Spaces

- 1. Introduction 501
- 2. A C^1 Polynomial Macro-element 502
- 3. A C^1 Macro-element on the Alfeld Split 507
- 4. A C^1 Macro-element on the Worsey-Farin Split 512
- 5. A C^1 Macro-element on the Worsey-Piper Split 516
- 6. A C^2 Polynomial Macro-element 519
- 7. A C^2 Macro-element on the Alfeld Split 523
- 8. A C^2 Macro-element on the Worsey-Farin Split 529
- 9. An Alternate C^2 Worsey-Farin Macro-element 536
- 10. A C^2 Macro-element on the Alfeld-16 Split 543
- 11. A C^r Polynomial Macro-Element 547
- 12. Remarks 556
- 13. Historical Notes 557

Bibliography 558
